

The leading lost & found software in Europe

Nova Find, the web-based lost & found solution creates excellent customer service!

On average, found items are captured every 30 seconds. Nova Find, the state-of-the-art lost & found solution, fulfills all requirements of a modern lost & found service: a sophisticated search technology, high return rate and easy administration of found items, reduced communication and storage costs. But above all else: Networked online search in all participating databases.

The overall solution for your digital lost & found office

Nova Find is a web-based Software-as-a-Service (SaaS) solution. This eliminates all operating costs, but also expenses for hardware and installation.

Your benefits

Automatic matching

Each new found item is automatically matched with all found records. Each individual search query is compared with all stored items in participating lost & found offices.

Higher return rate through international search

The return rate is significantly increased by extending the hit comparison to the global database. The high hit rate leads to a shorter retention period and enables to return found items quicker.

Effort and expense reduction

Found objects can easily be searched online. Thanks to Nova Find, communication effort and costs are considerably reduced.

Weighted search results

An automatic comparison of hits with weighted search results makes it possible to quickly assign find and loss records. The data in the loss record can be automatically transferred to the find record so that no data has to be copied manually.

Shortened storage time

The fast delivery of finds reduces the storage time of found items and thus the storage costs.

Compliant with legal restrictions

Nova Find complies with all legal requirement with regard to find fee, finder's reward, property claims and storage periods. Required notifications are created and sent on time.

RUBICON is Europe's leading lost & found solution provider

- ✦ Lost & found platforms for more than 30 million citizens
- ✦ Servicing over 2,400 cities, municipalities, transport companies and airports.
- ✦ Largest software solution for lost & found records in Germany, Austria, Switzerland, Liechtenstein and South Tyrol.

 **Nova Find**

Test Nova Find without obligation and convince yourself.

Mobile search screen

Multi-language

Each new find item is checked against all existing loss reports, regardless of the input language.

Online search for passengers

An easy-to-use, barrier-free web dialog is available online for searching for found items.

Mobile App

Nova Find is also available for smartphones! Find and loss records can be created easily via mobile app. In addition, the integrated camera serves as a barcode scanner - for even more efficient storage management.

Always and everywhere: Nova Find's online search is available around the clock and on any device. If the item is not yet listed, a loss record can be submitted immediately.

Fast: It only takes a few moments to create a loss record: Using numerous criteria (e.g. color, brand), the lost item can be described exactly. The loser receives a hit list weighted according to the match results.

Successful: The search considers found items from all participating regions and companies (e.g. transport companies) and increases the hit rate significantly. The search in numerous lost & found offices has finally ended with Nova Find.

Overview of all functionalities

1. Simple capture of found and loss records via browser or mobile app
2. Well-structured categorization of found items
3. Automated creation of predefined documents such as notifications and confirmations
4. Fast and easy storage management through simultaneous processing of multiple items
5. Identification of found items by barcode
6. High transparency and traceability of all processes
7. Current statistics and evaluations
8. Individual design and adaptation to the corporate design
9. Wide configuration options
10. Intuitive user administration and assignment of employee-specific roles and rights
